March 5th, 2019 - A solubility curve is prepared by pooling the data from all of the students Set For all solids there is a limiting amount that will dissolve in a given amount of solvent Some solids are very soluble in water while others are nearly completely insoluble About 200 grams of ordinary sugar will dissolve in 100 grams of water at  $25^\circ C$  but only about  $2 \times 10^{-4}$  g  $AgCl$  will dissolve under those conditions The solubility of a solid in a given solvent depends on the temperature of the solution

February 21st, 2019 - Lab Solubility Curve of Potassium Nitrate in Water  
Introduction Solutions are homogeneous mixtures of solvents the larger volume of the mixture and solutes the smaller volume of the mixture For example a hot chocolate is a solution in which the solute the chocolate powder is dissolved in the solvent the milk or water The solute and solvent can be a solid liquid or a gas A solution forms when the attractive forces between the solute and the solvent are similar For example
